COMPETENCIES

Tools: C#, Unity, Photon, Mirror, VContainer (Dependency Injection) Git, Claude Code

Language: English - B2

PROFESSIONAL EXPERIENCE

Game Developer - Ludu Arts

Nov 2025 - Present

- Developed a co-op multiplayer party game using Unity.
- Implemented gameplay features and resolved multiplayer-related bugs.
- Improved network synchronization and performance using Photon.
- Applied CPU, GPU, and memory optimization techniques to enhance runtime performance.
- Designed modular and scalable gameplay systems with clean code principles.
- Collaborated with game design, level design, and art teams for feature integration.
- Developed a full Steam game project from scratch, managing implementation and optimization processes.
- Integrated AI-assisted workflows (Claude Code) into development processes, accelerating iteration cycles and improving debugging efficiency.
- Ported a co-op multiplayer game from PC to mobile platforms for App Store release.
- Integrated and configured multiple SDKs including AppsFlyer, AppLovin (mediation), Firebase, Google AdMob, Unity Ads, and Meta Ads.
- Implemented ad mediation using AppLovin to optimize ad revenue across multiple ad networks.
- Integrated GameAnalytics to track player behavior and in-game events.
- Developed in-app purchase (IAP) systems and rewarded ads flow to support monetization.
- Designed and implemented a scalable monetization infrastructure combining ads and in-app purchases.
- Prepared the project for mobile release, ensuring platform compatibility, stability, and performance optimization.
- Contributed to porting the game to console platforms alongside mobile.
- Designed and implemented a local multiplayer system supporting 2–4 players with split-screen functionality.
- Developed robust player session management, handling controller disconnect/reconnect scenarios and dynamic player join/leave events.
- Ensured stable gameplay experience by addressing edge cases in local multiplayer flows and player state synchronization.

Game Developer Intern — UDO Games

Jul 2025 – Aug 2025

- Contributed to a mobile game project developed with Unity.
- Implemented UI management, level transitions, and in-game interaction systems.
- Integrated custom tools and extensions to improve team workflow.
- Optimized assets and managed prefab and scene structures.
- Participated in Agile/Scrum processes and daily stand-up meetings.
- Designed reusable data systems for in-game data management.
- Developed custom shaders and improved rendering performance.
- Collaborated closely with designers and 3D artists for content integration.

Software Engineer Intern — Heetsoft Information Technology

Nov 2024 – Feb 2025

- Contributed to software and product development processes.
- Gained experience in the full software development lifecycle.
- Provided technical support and suggested improvements for ongoing projects.

Gameplay Programmer / Tester Intern — Codeo

Aug 2024 – Sep 2024

- Implemented gameplay mechanics in game projects.
- Participated in testing processes and identified software bugs.
- Provided feedback to improve gameplay quality and stability.

Coding Trainer — Logiscool

Sep 2023 – Jan 2024

- Taught algorithmic thinking and programming fundamentals to children.
- Guided students in developing Scratch-based projects.
- Designed progressively challenging coding exercises.

Education

Üsküdar University — BSc in Software Engineering

Sep 2020 – Jul 2025
